

Effect on receiving variable

Functional forms

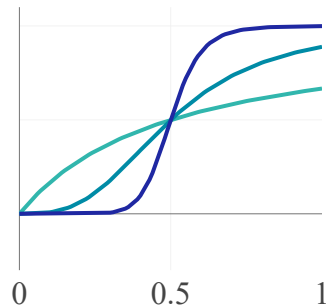

Logistic function

Probit function

Hill function

Slope

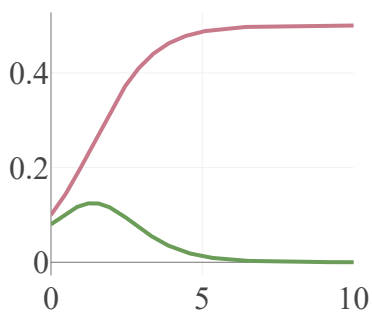

Influencing variable

Timeseries

$$\text{Inflow} = s * \text{Stock} * (1 - \text{Stock} / K)$$

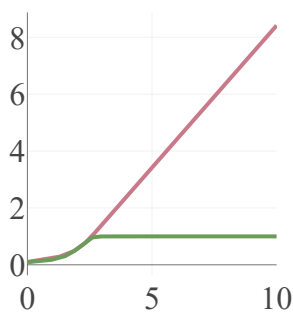

$s (\text{slope}) = 1, K = 0.5$

Value

$$\text{Inflow} = \text{pnorm}(\text{Stock}, \mu, s)$$

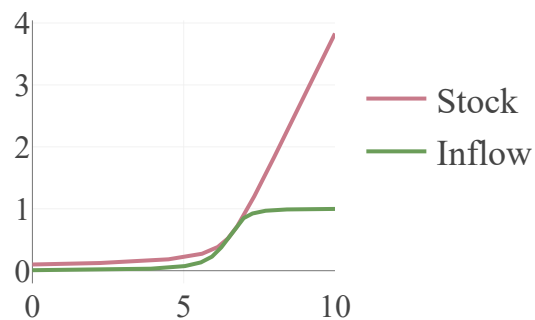

$s (\text{slope}) = 0.3, \mu = 0.5$

Time

$$\text{Inflow} = \text{Stock}^s / (K^s + \text{Stock}^s)$$

$s (\text{slope}) = 3, K = 0.5$
